How we detect Endometriosis.

1
SECRETED PROSTAGLANDIN NEUROTRANSMITTER

Endometriosis tissue, regardless of location, secretes PGE2 and PGFα neurotransmitters.

2
CIRCULATORY TRANSPORT

PGE2 and PGFα transported via circulatory system.

3
UNIQUE DIGITAL FINGERPRINT

Resulting seizure-like spasm produces abnormal small bowel myoelectrical activity unique to endometriosis and detected by the EndoSure Test.

30 Minute, Non-Invasive and Highly Cost Effective

The EndoSure Test is easy to perform and provides a simple, objective result.

It detects all stages of endometriosis. The test is suitable for post-treatment diagnostic vigilance as well as a routine screening program.
