> VCare® uterine manipulators help you deliver a better surgical experience.

- Provides superior exposure and access to pelvic cavity
- Delineates vaginal fornices for easy identification of colpotomy plane
- Maintains pneumoperitoneum throughout the procedure

> Easy To Use

- One-piece, fully assembled configuration for procedural efficiency
- Eliminates cost associated with additional components, repair, sterilization, or lost parts

> Additional Benefits

- Permits cervical cup suturing for improved stability of the uterus
- 10cc inflatable balloon reduces risk of uterine perforation by anchoring the uterus and stabilizing the shaft within the uterine cavity
- Chromopertubation dye port on handle reduces need for multiple instruments

FERDINAND MEDICAL

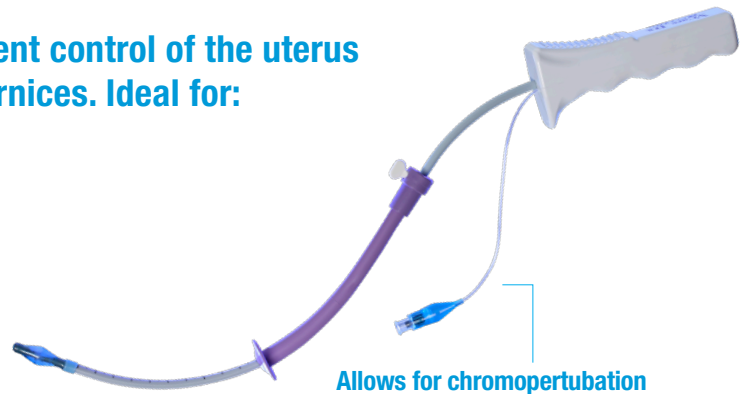

Advanced Equipment, Trusted Care

VCARE® PLUS AND
VCARE® DX PLUS

VCare® DX Plus provides excellent control of the uterus without distention of vaginal fornices. Ideal for:

- Tubal Ligation
- Supracervical Hysterectomy
- Diagnostic Laparoscopy
- Tubal Occlusion
